*A weed control trial was carried out in a two-year-old immature oil palm planting to evaluate the efficacy of metsulfuron-methyl against *Dianella ensifolia*, an evergreen perennial shrub. Results from 13 weeks' evaluation showed that metsulfuron-methyl at 90 g a.i. per hectare alone was effective against the weed with 100 per cent control and there was no regrowth when the trial was terminated at the thirteenth week after treatment.*

Keywords: *Dianella ensifolia, metsulfuron-methyl, weed management.*
