

FINAL ANNOUNCEMENT ISP CENTRAL SARAWAK BRANCH SEMINAR 2024

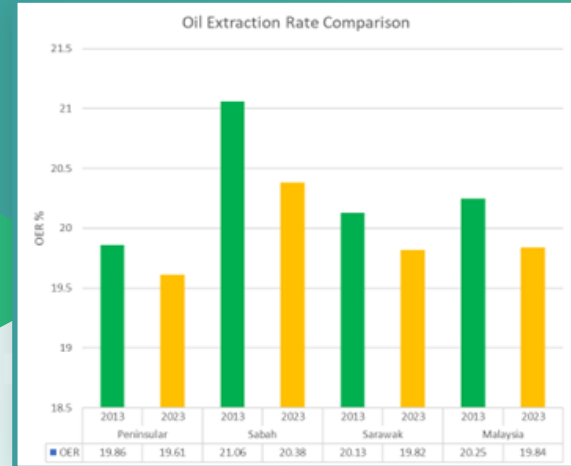

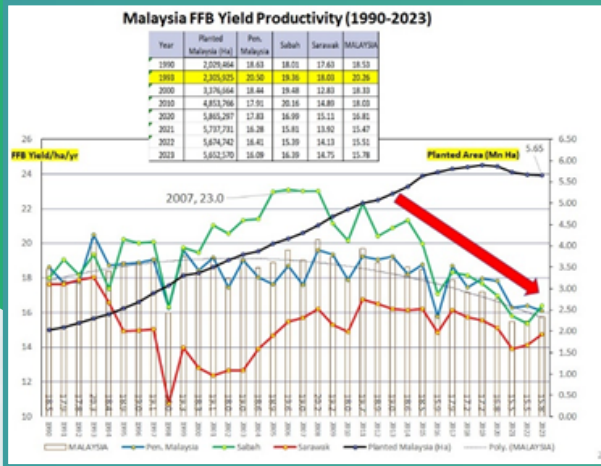

Oil Palm Replanting

**Innovative Strategies and Sustainable Approaches to
Overcome Challenges and Achieve Maximum Yield**

Kingwood Hotel Sibuh

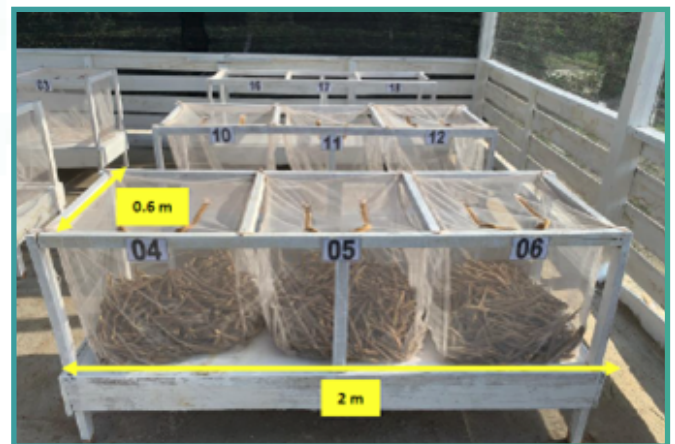

2nd & 3rd December 2024

The oil palm industry has come a long way, marking more than a century of cultivation in Malaysia. Over the years, the industry has progressed by leaps and bounds, to become the dominant crop cultivated in Malaysia. Advancements in agronomy, management, and processing have ensured the success of this golden crop. Nevertheless, the oil palm industry in Malaysia is plagued with decreasing productivity over the past 10 years. Not only has yield per hectare decreased, the oil extraction rate has also declined. Increasing productivity and yield has been the biggest challenge to the Malaysia oil palm industry for the past decade.

The Incorporated Society of Planters (ISP) Central Sarawak Branch is proud to announce the Oil Palm Replanting Seminar, scheduled for the 2nd and 3rd of December 2024 at the esteemed Kingwood Hotel in Sibul, Sarawak. Under the resonant theme, “Oil Palm Replanting: Innovative Strategies and Sustainable Approaches to Overcome Challenges and Achieve Maximum Yield”, this seminar endeavours to explore the problems besetting the oil palm industry and to explore innovative strategies essential for confronting the evolving challenges within our industry.

This seminal gathering aspires to explore the major problems affecting the oil palm industry today, especially with regards to replanting. We have identified key areas, such as pest and disease, pollination for better fruitset, usage of GIS in relation to replanting, achieving early high yields and land preparation.

With the invaluable support of ...
